DETAILED ACTION

Response to Arguments

1. Applicant's arguments filed 8/24/05 have been fully considered but they are not persuasive. It appears that the applicant's interpretation of the language "said tip ball designed and configured to conform to the shape of said tip bal" is narrower than that of the examiner. First of all, the claims never claim any specific structure to define the language indicated above. Finally, the Shiobara et al. reference clearly showed the pushing end as claimed contacting the tip ball (6). In that aspect, the pushing end of the contact element can be considered as being "designed and configured" to conform to the shape of the tip ball (6). Therefore, the rejection of claims 1-19 is maintained as indicated in the previous office action. A copy of which is below.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

- (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 2. Claims 1-19 are rejected under 35 U.S.C. 103(a) as being unpatentable over Shiobara et al., as discussed above, in view of Schneider, Otsuka, or Schwartzan.

Shiobara et al., as seen in Fig. 4, includes a housing (4) as claimed, a tip ball (6) as claimed, a biasing element (7) as claimed, and a ball pusher (8) as claimed. The contact element is considered to make from a material of low coefficient of friction versus the material of the tip ball since it is an inherent feature that focus by one of

Art Unit: 3751

ordinary skill pen manufacturing and since the claims does not claimed any specific range or value.

Although the Shiobara et al. reference does not explicitly state that the pushing end contact element (8c) is designed and configured to conform to the shape of the tip ball, attention is directed to the Schneider, Otsuka, or Schwartzan reference, which discloses an analogous point assembly which shown a ball pusher with a contact element having a pushing end contacting a tip ball designed and configured to conform to the shape of the tip ball. Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to employ, on the Shiobara et al. contact element, a pushing end contacting a tip ball designed and configured to conform to the shape of the tip ball (if not already) as, for example, taught by Schneider, Otsuka, or Schwartzan.

Conclusion

3. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of

the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

4. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Tuan N. Nguyen whose telephone number is 571-272-4892. The examiner can normally be reached on Monday-Friday (10:00-6:00).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Justine R. Yu can be reached on (571) 272-4835. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only.
